

Deep Dive Analysis Report

Sales Performance Dashboard using Power BI

1. Objective

The objective of this project is to perform a deep-dive analysis of sales data and build an interactive dashboard using Power BI. The dashboard helps monitor key business metrics, identify sales trends, analyze product and city performance, and support data-driven business decisions.

2. Dataset Overview

The dataset contains sales transaction records including customer details, product information, order details, category, city, quantity sold, unit price, and total sales.

Dataset Features

- Order ID
- Order Date
- Customer ID
- Customer Name
- Product
- Category
- City
- Gender
- Quantity
- Unit Price
- Total Sales

3. Key Performance Indicators (KPIs)

KPI	Formula	Purpose
Total Sales	SUM(Total_Sales)	Measures the total revenue generated from all sales transactions.

Total Orders	COUNT(Order_ID)	Calculates the total number of customer orders placed.
Total Quantity Sold	SUM(Quantity)	Measures the total number of product units sold.
Average Order Value	Total Sales ÷ Total Orders	Calculates the average revenue generated per customer order.
Average Unit Price	AVERAGE(Unit_Price)	Determines the average selling price of products.

4. Dashboard Components

The interactive dashboard includes:

- **KPI Cards**
- **Monthly Sales Trend**
- **Sales by Category**
- **Sales by City**
- **Sales by Product**
- **Gender-wise Order Distribution**
- **Interactive Filters (Category, City, Gender)**

5. Deep Dive Analysis

Monthly Sales Trend

The monthly sales trend helps identify seasonal fluctuations and highlights periods of higher and lower sales performance.

Category Analysis

The category-wise analysis compares the sales generated by different product categories, helping identify the highest-performing categories.

City Analysis

The city-wise visualization highlights geographical sales performance and identifies cities contributing the most revenue.

Product Analysis

The product analysis compares sales across different products, making it easier to identify top-selling products.

Gender Analysis

The gender distribution chart provides insights into the order distribution among customers.

6. Key Findings

- **Electronics generated strong sales compared to other categories.**
- **Sales varied across months, indicating changing customer demand.**
- **Some cities contributed significantly more revenue than others.**
- **Product sales were concentrated among a few top-selling products.**
- **The dashboard allows quick filtering using Category, City, and Gender slicers.**

7. Conclusion

The Power BI dashboard provides an interactive overview of business performance using multiple visualizations and KPIs. It enables users to explore sales data efficiently, compare performance across categories and cities, and identify important business

trends. The dashboard can support informed decision-making through simple and interactive analysis.

8. Tools Used

- Microsoft Power BI
- Microsoft Excel
